## RHODODENDRON RACEMOSUM

F. P. I. 59717.

THE above illustrated form of this species has proven itself a very hardy and lovely dwarf rhododendron quite adaptable to our Rock Gardens in the Eastern United States.

Its bright, clear, rose flowers fit admirably into the color scheme of the dwarf daffodils, iris and other rock plants of its season while the small evergreen leaves dark and lustrous above, glaucous white below and the coral pink of its twigs and winter flower buds make it an attractive plant at all seasons.

Rhododendron racemosum F. P. I. 59717 is included with more than a hundred other rare forms and species of rhododendrons and azaleas in our current list.
